

FUNCTIONAL REQUIREMENT & TESTER SPECIFICATION

Storefront Web Portal & Admin Control Panel | Target Audience: QA Testing Team

1. Code-Verified Architecture Overview

This specification establishes the functional criteria for verifying the user interface, page routing, visual elements, localized toggles, and administrative database forms. Testing must verify both English (LTR) and Arabic (RTL) rendering across desktop and mobile layout profiles.

2. Frontend Storefront Website Functionality

2.1 Navigation & Global Header Toggles

- **Language Selector:** Real-time toggle between English and Arabic. Arabic selection must trigger Right-to-Left (RTL) page structure alignment and load Arabic localization translations.
- **Currency Switcher:** Toggles all catalog and pricing display text between United Arab Emirates Dirham (AED) and US Dollars (USD).
- **Customer Support Link:** Header CTA triggers direct WhatsApp chat channels with dedicated sales representatives.

2.2 Homepage Structure & Section Ordering

Verify that layout modules rendering below the main hero banner appear in exact codebase sequence:

- **1. Header Component:** Language selector (EN/AR), currency switcher (AED/USD), and customer service links.
- **2. Hero Section:** Primary title copy, subtitle badge, watch mockup asset, and 4 floating metadata text bubbles.
- **3. New Arrivals Section:** Dynamic watch model cards and a secondary craftsmanship banner image gallery.
- **4. SpecsBar Component (USPs):** Highlight bar rendering key features: Sweep Movement, 904L Oystersteel, and Sapphire Crystal properties.
- **5. Luminescence (Architecture of Time):** Section presenting night-lume visibility details. Managed in Admin under the 'Architecture & RM' (heritage) tab.
- **6. Signature Collection Section:** Core watch product catalog showing audience filters ('Mens' / 'Womens' / 'ALL').
- **7. Testimonials Carousel:** Client reviews slider rendering review descriptions, customer names, and stars.
- **8. Maison Aeterna (T24 Atelier):** Swiss Clone replica heritage details. Managed in Admin under the 'Atelier Section' (atelier) tab.
- **9. Delivery Promise Section:** Delivery terms (Dubai prioritised same-day, GCC regions excluding Oman, USA shipping).

2.3 Watches Catalog Page (/watches)

- **Search Box:** Input field searching watch names and manufacturing factories.
- **Filters Selector:** Select dropdowns filtering by Brand, Model variant, and Audience (Mens / Womens).
- **Sort Engine:** Client-side sorting calculated on watch list, sorting prices from lowest-to-highest and highest-to-lowest.
- **Load More Pagination:** Renders 12 products per batch; clicking loads subsequent pages.

2.4 Product Detail Page (/product/:id)

- **Warranty Callout Banner:** Displays active shield badge highlighting '2-Year Service Warranty' at the top.
- **Standardised Spec Order:** Specs details grid must match exact implementation order: *Service Warranty* → *Brand* → *Model* → *Reference* → *Material* → *Size* → *Movement* → *Caliber* → *Bezel* → *Glass* → *Water Resistance*.
- **Inquiry Button:** Pre-populates target WhatsApp messaging formats with watch name and reference identifier.

2.5 Collections & Journal Pages (/collections, /blog)

- **Collections Page:** Displays celebrity watch matches combining dynamic product files with media assets.
- **Journal Blog Page:** Dynamic blog category selector chips filtering articles loaded directly from the database.

3. Administrative Control Panel (Admin Dashboard)

Accessed securely via /admin/login. The dashboard allows editing the database parameters without modifying project code files.

3.1 Watch Catalogue Management ('products' Tab)

- **Watch List Table:** Grid showing watch details, stock status (In Stock / Out of Stock toggle), and visibility status (Show / Hide in catalog toggle).
- **Add/Edit Watch Form Fields:** Form validation verifying Name, Brand, Audience, Factory, Price USD, Price AED, URL Slug, Image Asset, Gallery Array, Movement, Casing, Bezel, Glass, Water Resistance, Description, Features list tags, Stock Status, Catalog Visibility, Model Category, Reference Code, Material, Case Size, Caliber, and Warranty text.
- **Asset Uploading:** Integrates direct binary image upload pipelines (e.g. Cloudinary).

3.2 Landing Page Content Management ('homepage' Tab)

- **'hero' (Hero & Specs):** Updates main banner titles, subtitles, CTAs, and floating watch text tags.
- **'arrivals' (New Arrivals):** Sets the watches highlighted in the homepage new arrivals list.
- **'heritage' (Architecture & RM):** Edits Architecture of Time (Luminescence) heading texts and marketing columns.
- **'atelier' (Atelier Section):** Configures T24 Atelier (Maison Aeterna) details, heritage paragraphs, and captions.
- **'catalogue' (Catalogue Header):** Edits catalog introduction headers and description text.
- **'testimonials' (Client Testimonials):** Admin interface to edit customer names, review copy, and ratings.
- **'footer' (Footer & Contacts):** Edits copyright text, default WhatsApp message templates, and sales reps directories.
